DETAILED ACTION

1. In view of the amendment of November 10, 2005, previous 102(b) rejection on claims 39, 24, 25, 27 and 46 over Kojima et al'534 and previous 102(b) rejection on claim 41 over Usagawa et al (JP'651) are hereby withdrawn.
2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent

granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 39, 24, 25 and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by Kotzev (US 2004/0249099 A1).

Kotzev teaches (see [0003]) a polymer of the following monomer:

In [0006], Kotzev teaches $-\text{CH}_2\text{CH}_2-$ as one of several specific examples for R_2 .

Therefore, one skilled in the art would immediately envisage R_2 to be $-\text{CH}_2\text{CH}_2-$. The polymerization takes place through the (meth)acrylic bond (see [0009]). Such polymer teaches present polymer binder of claim 39 (Structure A of (III)): present R_1 's are H atoms and present EWG is $-\text{CN}$, and present R_2 is $-\text{COO}-\text{CH}_2\text{CH}_2-$ group (which is an electron-withdrawing group) and being bonded to the (meth)acrylic backbone.

Therefore, Kotzev teaches present inventions of claims 39, 24 and 25.

With respect to present claim 27, Kotzev teaches that his R_2 group may be substituted by alkoxy, alkoxyalkoxy, carbalkoxyalkyl or *halogen*. Since there are only four choices given, one of ordinary skill in the art would immediately envisage Kotzev's R_2 ($-\text{CH}_2\text{CH}_2-$ group) substituted by halogen. Therefore, Kotzev teaches present invention of claim 27 (CH_2X).

Art Unit: 1752

5. Claims 39, 24 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Woods et al (5,187,048).

Woods teaches (see abstract) a photoresist coating for use in microlithography comprising a polymer made from allyl 2-cyanopenta-2,4-dienoate, which structure is shown in Formula Va in which R^7 is C_3 alkenyl group. Such polymer teaches present polymer binder of claim 39 (Structure A of (III)): present R_1 's are H atoms and present EWG is $-CN$, and present R_2 is $-COO-CH_2-$ group (which is an electron-withdrawing group) and being bonded to the polymer backbone. Therefore, Woods teaches present inventions of claims 39, 24 and 25.

Allowable Subject Matter

6. Claim 3-5, 16, 36, 41 and 45-47 are allowed. Neither Kotzev nor Woods teaches present light attenuating compound of claim 46 (in Structure A of (III) in claim 46, present R_2 can only be cyclic alkyls or acyclic alkyls). Previously cited Usagawa et al (JP'651) does not teach or suggest present EWG group of claim 41 (Usagawa's EWG is $-C(=O)-N$). None of the cited prior arts teaches or suggests present light attenuating compound of claim 36, 45, or 47.
